

Proof of Evolution for ecosystems

What happened with the tokens and the people after a distribution, measured from facts anyone can check.

What incentive budgets cannot see today

- Each program sees only its own slice of history: its own recipients, in its own window.
- What the same wallets did before and after the distribution is outside that view.
- A recipient has no portable record of their path without handing over identity documents.

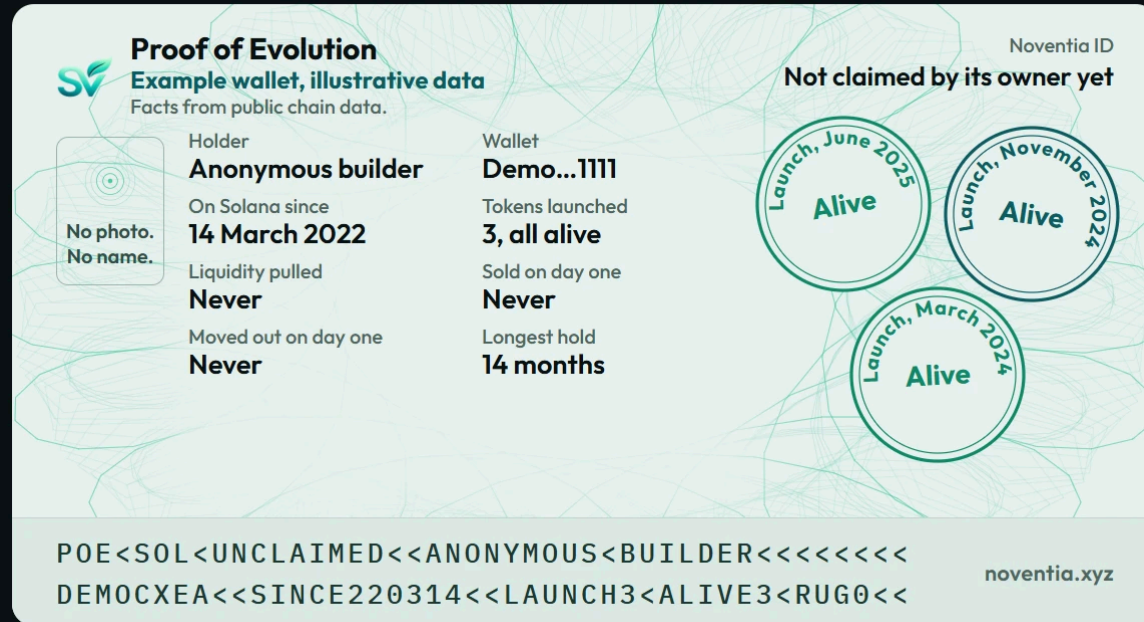

What a report measures after a distribution

Metric	Definition
Recipients	Distinct wallets that received the distribution
Sold in 24 hours	Recipients that sold or moved out at least 50% within 24 hours
Still holding	Recipients still holding at least 50% at 30 and at 90 days
Farm clusters	Recipients funded from one source within 24 hours, and their share of tokens. A heuristic, labeled as such
Went to exchanges	Share of distributed tokens sent to known exchange deposit addresses. Not measured at stage 2: the address list is empty

How the numbers are made

- **Facts with proofs.** Every number comes from transactions anyone can open in an explorer.
- **Totals only.** No single wallet is named unless it belongs to the project or its owner made it public.
- **Open method.** Every threshold is stated, every known limit is listed, and the method version is recorded with the numbers.
- **No intent.** A report states what happened, never why.

One page of a passport

Example wallet, illustrative data. A card covers only a wallet its owner made public.

Red lines

- No custody of anyone's money.
- No seed phrase requests, no transactions sent to sign.
- No sale of personal data.
- No single total score per person, and no automatic “scammer” label.
- No investment advice and no trading signals.
- No names, ID documents, KYC or biometrics.

Status today

Built (stage 2, October 2026)

- Solana fact collector: every fact comes with its transactions.
- Card rules version 2: card numbers, four warning levels, stamps.
- Passport card renderer, clean and high risk.

Next

- The first report on one Solana distribution (stage 2).
- Stage 3: indexer, web passport, free wallet check, attestation on Solana.

The first report

Coming. It is not published yet.

- One Solana airdrop or incentive program.
- The metrics on slide 3, with the method, the thresholds and the known limits written out.
- Published on noventia.xyz/reports. Every number on the page is read from the report's data file.

What we ask for

One program to analyze: its mint and distribution transactions, or its published recipient list.

What the project gets. The first report is free. The project sees it before publication and can add a reply that is published with it.

The method and the definitions are public: noventia.xyz/docs and noventia.xyz/whitepaper.
